Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 July 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsieh (5,979,274) in view of Arnold et al. (5,233,891).

Hsieh ('274) discloses prior art one-way ratchet wrenches having a pawl with a locking portion extended outward and secured therefrom. Hsieh ('274) teaches the modification of placing the elastic member such that the elastic member is mounted in a blind hole, which is aligned with the longitudinal axis of the handle of the tool, and such that a side of the elastic member contacts the pawl for controlling movement of the pawl. Therefore, the examiner, respectfully, contends that the disclosure of Hsieh ('274), taken as a whole, suggests the structure of the one-way ratchet wrench as presently claimed, except for the use of an elastic bar as the elastic member, instead of a coil spring. Arnold et al. ('891) show that elastic members may be formed from coil springs, rubber-like material, or polymeric materials, each having equivalent functions. Therefore, because these elements were art-recognized equivalents at the time the invention was made, one of ordinary skill in the art would have found it obvious to substitute an elastic bar, as demonstrated by Arnold et al. ('891) for the coil spring of Hsieh ('274).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chang, Chang et al., Chen, Hsu, Hu, Ling, Liu, Shiao, Wang, Wei, and Werner each disclose a ratchet wrench.
